The metal cladding will be cut back, and new pre-finished metal flashing and waterproofing will be applied to the window opening.

Structural metal stud with glass-mat gypsum sheathing and an air/vapour barrier on the exterior face. This assembly will be located beneath the aluminum window.

The new insulated metal panel exterior profile and colour will be determined later. The 5/8" gypsum board sheathing will be fastened to the existing concrete column and covered with a waterproof air/vapour barrier membrane.

A baseboard heater is located below the patio door opening.

Concrete

A single-layer cladding will be installed around the column.
